

Explore the Future of Civil Aviation

Explore the Future of Civil Aviation

The sixth edition of the ICAO World Civil Aviation Report is out!

It reveals some of the incredible transformations now occurring in air transport, especially in the key areas of sustainability and digitalization.

Through this report, we show trends, initiatives, and strategies undertaken to reemphasize the commitment towards the long-term aspirational goal of net zero carbon emissions by 2050. From sustainable aviation fuels, cleaner energy sources, and innovative technologies to partnerships beyond the aviation industry, we cover several pertinent topics that will likely impact CO₂ emissions.

We are also attentive to the digitalization initiatives through the aviation industry that will affect aviation safety, air navigation, digital trust, and cybersecurity – topics covered in detail in this year's edition.

This edition also carries the latest statistical reports, trends, and campaigns, including:

- Innovation at ICAO – a year in review
- 2021 Air Transport Statistics
- Security statistics 2022
- Aviation accident statistics 2022 and 2021
- ICAO digital travel authorizations

- Digital immersion and the future of aviation

And what's more, you get all this information at ZERO COST. Just register on ICAO eLibrary and access your complimentary copy today.
